

oral gel

specialised support

blue'm oral gel instructies (NL)

Beschrijving: Eenmaal aangebracht op het te behandelen gebied, zal de oral gel zuurstof vrijgeven waardoor een gedeeltelijk hoge zuurstofdruk (pO_2) ontstaat, wat helpt bij het herstel van de micro-omgeving voor een gezonde mondholte. blue'm oral gel heeft een witte en matte kleur en de geur is zoet. blue'm oral gel is niet bedoeld voor gebruik in combinatie met andere medische hulpmiddelen, medicijnen of andere medische technologieën.

blue'm oral gel wordt niet aanbevolen voor gebruik met metalen voorwerpen zoals metalen naalden, metalen implantaten of metalen protheses, met uitzondering van

titanium en andere edele metalen.

Beoogd gebruik: Het beoogde doel van blue'm oral gel is het herstellen van normale zuurstofniveaus in de mondholte. De gel is bedoeld voor toepassing in poekets, bij bloedend tandvlees, wonden door extractie, kaakchirurgie en het plaatsen van implantaten, chemotherapie of door een niet passend kunstgebit.

Gebruiksaanwijzing: Droog als eerste het aangetaste gebied met een wattenstaafje zodat de gel goed zal blijven zitten. Breng vervolgens blue'm oral gel aan op de plaats waar dat nodig is met behulp van de tube: gebruik maximaal 1 ml oral gel op elke locatie, dat is ongeveer zo groot als een erwjt. Breng niet meer dan 5 ml oral gel per dag aan.

Laat de gel zo lang mogelijk op zijn plek zitten, maar spoel je mond ongeveer een uur na toediening.

Gebruik blue'm oral gel niet op poekets rondom tanden of implantaten, en / of spoelen met blue'm tandpasta / bloedend tandvlees of wonden. De tandproblemen kunnen het gevolg zijn van extractie, kaakchirurgie en het plaatsen van implantaten, chemotherapie of door een niet passend kunstgebit.

Meld aan de fabrikant en uw lokale gezondheidsinstantie elk ernstig incident met betrekking tot het gebruik van dit hulpmiddel dat direct of indirect kan leiden tot risico's op overlijden of verslechtering van de gezondheid.

First dry the affected area with a cotton

blue'm oral gel instructions for use (EN)

Description:

Once applied on the affected area, the gel will release oxygen creating a partially high oxygen pressure (pO_2), which aids in restoring the micro-environment for a healthy oral cavity. blue'm oral gel has a white and matte colour and the odour is sweet.

Intended users:

The intended users are either Healthcare Professionals (HCP) working within dental healthcare or persons with dental issues such as poekets, bleeding gums and/or wounds that can result from extraction, oral surgery and placement of implants, chemotherapy or false teeth in their mouth.

Application:

blue'm oral gel instructions for use (EN)

Intended use:

The intended purpose of blue'm oral gel is to restore normal levels of oxygen in the oral cavity. blue'm oral gel is intended to be applied at: poekets, bleeding gums, or wounds, which is approximately the size of a pea.

Do not apply more than 5 ml of oral gel per day. Leave the gel on the site as long as possible, but rinse your mouth approximately one hour after application. Use blue'm oral gel after brushing and / or rinsing with blue'm toothpaste / mouthwash or as indicated by your dental professional.

Instructions:

First dry the affected area with a cotton

swab so that the gel will remain better on-site. Then use the tube to apply blue'm oral gel at the place where it is needed: maximally 1 ml of oral gel at each location, which is approximately the size of a pea.

Report to the manufacturer and your local health authority any serious incident in relation to use of this device that may directly or indirectly lead to risk of death or deterioration of health.

Ingredients:

Aqua, Alcohol, Glycerine, Silica, Sodium Saccharin, Sodium Perborate, Citric Acid, PEG-32, Sodium Gluconate, Cellulose Gum, Xanthan Gum, Lactoferrin.
